

Sprint 3 Retrospective

Date: April 17, 2019

Time: 11:00 - 11:50 PM

Location: SGM 101

Participants: Julia Wada, Connor Buckley, Will Borie, Alex Colello, Emily Jin

Description of outcomes of the meeting:

As of the end of Sprint 2, there are a few processes in mind that we would like to improve on as we move into Sprint 3. Every scrum, we will be merging any changes that have been made since the last scrum into the master branch on Github since one of the issues we faced this Sprint was merging everything towards the end of the Sprint. We did improve our previous issue of “sustainable pace,” so we hope to maintain that through Sprint 3 as everyone will be preparing for finals within these next few weeks. We also need to standardize our numbering system as different files would track indices differently, so we will meet during scrums and communicate more frequently regarding shared designs. Finally, we hope to shorten our document a little bit more. Our first document was over 35 pages, and this second document was around 30 pages. We’re hoping to shorten our document to around 20 pages by reducing the total number of commits per pair programming session, since we have almost 20 pages in just pair programming and scrum sessions.
